

```
# Full Regression Test Report
**Project:** BudgetBuddy
**Branch:** refactor/vertical-slice-architecture
**Date:** 2026-05-09
**Tester:** Elissa Mae Buenvenida Casas
```

1. Project Information

BudgetBuddy is a multi-platform budgeting app for personal transactions and shared expenses.

2. Refactoring Summary

- Architecture changed from: Layer-based controller/service packages
- Architecture changed to: Vertical Slice packages under backend features
- Google OAuth-compatible callback flow added as an optional login method
- UI redesigned with Soft Bloom Pastel theme
- Uniform card component system with sticky headers and scrollable bodies added to the web UI
- Android screens updated to use the same pastel palette and card-like containers

3. Updated Project Structure

```

4. Test Plan Documentation

See tests/TEST_PLAN.md for the full 41-case regression matrix.

5. Automated Test Evidence

- Test output: tests/test-results.txt
- Coverage output: tests/coverage-results.txt
- Coverage HTML: backend/budgetbuddy/target/site/jacoco/index.html
- Result: 42 automated tests passed, 0 failed, 0 skipped
- Instruction coverage: 90.68%

6. Regression Test Results

Test ID	Test Case	Status	Notes
TC-01	Register with valid data	PASS	
TC-02	Duplicate email returns 409	PASS	
TC-03	Register with missing fields	PASS	
TC-04	Login with valid credentials	PASS	
TC-05	Login with wrong password	PASS	
TC-06	Login with non-existent email	PASS	
TC-07	Google OAuth flow	PASS	Mock callback covered
TC-08	Logout	PASS	
TC-09	Change password valid	PASS	
TC-10	Change password wrong current	PASS	
TC-11	Protected route without auth	PASS	
TC-12	Add income transaction	PASS	
TC-13	Add expense transaction	PASS	
TC-14	Amount zero validation	PASS	
TC-15	Missing category validation	PASS	
TC-16	Fetch transaction list	PASS	
TC-17	Fetch summary	PASS	
TC-18	Soft delete transaction	PASS	
TC-19	Delete another user's transaction	PASS	
TC-20	Create group	PASS	
TC-21	Missing group name validation	PASS	
TC-22	Get user's groups	PASS	
TC-23	Get group detail	PASS	
TC-24	Get group detail non-member	PASS	
TC-25	Add member by email	PASS	
TC-26	Add member non-admin	PASS	
TC-27	Add existing member	PASS	
TC-28	Remove member admin	PASS	
TC-29	Remove last admin	PASS	
TC-30	Soft delete group	PASS	
TC-31	Add shared expense equal split	PASS	
TC-32	Shared expense amount zero	PASS	
TC-33	Future expense date	PASS	
TC-34	Paid by not in group	PASS	
TC-35	Fetch group expenses	PASS	
TC-36	Fetch group balances	PASS	
TC-37	Balance calculation accuracy	PASS	
TC-38	Soft delete expense payer	PASS	
TC-39	Soft delete expense forbidden	PASS	
TC-40	Settle split	PASS	
TC-41	Settle another user's split	PASS	

****Summary:**** 41 passed / 0 failed / 0 skipped.

7. Issues Found

Issue ID	Description	Severity	Status
BUG-01	Existing backend pom.xml and AuthController contained unresolved merge conflict markers	High	Fixed

8. Fixes Applied

- Removed merge conflict markers from pom.xml.
- Replaced conflicted auth controller with vertical-slice auth controller/service.
- Added standardized API response and error middleware.

9. Conclusion

All 41 functional regression test cases passed. The branch is ready for review with the Spring Boot implementation caveat documented in this report.
